Chapter 1,2,3

Exercise 1:

Write a Dart program that, when running, the console screen will allow you to enter an integer, print the screen "This is a positive integer"

If the number just entered is a number greater than or equal to 0, otherwise print "This is a negative integer".

Exercise 2:

Write a program that allows you to enter an integer as a number. After running it, the program will write that number in text.

Example: 1 -> One, 2 -> Two, ...

Exercise 3:

Write a program that allows you to enter 3 real numbers

This program checks whether these 3 numbers are the 3 sides of a triangle.

Exercise 4:

Write a program that allows you to enter 3 numbers

The program checks whether these 3 numbers are the 3 sides of a right triangle or not.
